

Redaction : opinion

The world wide web is an invention that was thought by Tim Berners-Lee, this innovation permits to people to express their creativity.

He sells some lines of code from his invention, this is in my opinion very good for him. These lines of code are so precious and mean so many things. It was the beginning of a big change for today's history.

He needs to get the credit for what he's created.

Artists for example sell their piece of art on the internet, it helps them to live their life as they want.

These people use something called NFTs, it's some virtual money. It is not physically real but people put a real value on this virtual goods.

These tokens help some artists to gain money. There is a very famous NFT right now that is named : Bitcoin, it's a cryptocurrency that uses the blockchain system.

What's really good about this cryptocurrency is that it is anonymous, their payment will be anonymous. The government can't tell what you just by, if you live in a country where they want to restrict your rights then Bitcoin is a good thing for liberty.

There is some bad news right now about this sort of NFTs, one of them is : it is not stable. This cryptocurrency doesn't have a stable value, it can make people nervous when they use them. They could buy a pizza for 5€ and then one week later they realise what they spend is now 10€.
